

**DWITE Online Computer Programming Contest  
December 2005**

**Problem 4**

**NOW I KNOW MY ABC'S**

You are to determine the frequency of each letter of the alphabet in a line of characters.

The input file (**DATA41.txt** for the first submission and **DATA42.txt** for the second submission) will contain five lines of data. Each line will contain at most 255 characters.

The output file (**OUT41.txt** for the first submission and **OUT42.txt** for the second submission) will contain five lines of data, each displaying the frequency of the letters of the alphabet, in alphabetical order, from the corresponding lines of the input file. Display only those letters that occurred at least once. Separate the letter (upper case) from the frequency with a hyphen and follow the frequency with a colon (except the last one).

**Sample Input (Two lines of data only)**

```
This sentence has 4 t's in it.  
And this one only has one.
```

**Sample Output**

```
A-1:C-1:E-3:H-2:I-3:N-3:S-4:T-4  
A-2:D-1:E-2:H-2:I-1:L-1:N-4:O-3:S-2:T-1:Y-1
```
